

What images we need for the NEXR website

The NEXR website is built from **six sections**. Each section has its own page, and each page has a lead image plus a small number of supporting images.

This document lists every single image we need, section by section, and describes exactly what each one should show. You do not need to look at the website to use this. Just work down the list.

§	SECTION	WHAT THE PAGE IS ABOUT	MINIMUM	IDEAL
01	The Gap	Why people hesitate to ask for help	4	6
02	Belief	Wellbeing should adapt to the person	4	6
03	MeloWorld	Our private, avatar-based virtual platform	4	6
04	VR Wellness	Guided VR experiences for wellbeing	4	6
05	Who It's For	Workplaces, schools & colleges, healthcare	4	5
06	Let's Talk	Closing invitation to get in touch	3	4
TOTAL		Across the whole website	23	33

Minimum is what we need for the page to work at all. **Ideal** is what we would like if budget and time allow — the page layout expands to use them. Please deliver the “Must have” items in full before starting on any “Nice to have” item.

How to read this document

There is one page for each of the six sections. Every section page contains a table, and every row of that table is **one image we need**. The columns mean:

REF	The code we will file the image under. Please use it in the filename you send back (see page 9).
WHAT WE NEED TO SEE	A short title, then a plain-English description of the picture. Treat the description as the actual instruction — it is written to be shot or rendered from directly.
TYPE	Photography = real people, real places, camera. 3D render = computer-generated environment or character. Screen = a capture or mock-up of our software interface, which we can supply source material for.
SHAPE	The crop the website uses. 4:3 and 16:9 are landscape, 3:4 and 4:5 are portrait. Always shoot wider than the crop — see page 9.
PRIORITY	Must have = the page cannot ship without it. Nice to have = only if there is room in the budget.

One thing to know before you start

Every section also has a **lead image** — the large picture at the top of the page. It is the first row in each table, marked – **LEAD**. These six are the most important images in the whole set. If you only deliver six things, deliver those.

The six lead images are currently filled with temporary placeholders (screenshots of an old design). Everything in this brief replaces them.

The number of images can flex

We have deliberately given a **minimum** and an **ideal** count per section rather than one fixed number. Some sections read better with three images, some with five. We will build the page layout around whatever you are able to deliver, so it is better to tell us early “we can do four here, not six” than to stretch a shoot thin. What we cannot do is drop below the minimum — those pages would have visible gaps.

House style — applies to every image

NEXR is a wellbeing technology company. The website sits on a **near-black background** with a single **warm amber accent** and off-white text. Images are placed onto that black and read as warm, quiet and grown-up. The overall feeling we are after is **calm, private and human** — never clinical, never corporate-stocky, never sci-fi.

WE WANT

- **Warm, low-key light.** Late afternoon, lamp light, window light. Shadows are fine and welcome.
- **Real, lived-in places.** Actual homes, actual offices, actual campuses — with clutter, texture and wear.
- **Quiet moments, not peak emotion.** People thinking, pausing, listening. Mid-action rather than posed.
- **Room to breathe.** Subjects placed off-centre with generous negative space, because text sits over these images.
- **A mix of people.** Different ages, ethnicities, body types and genders across the set, without making any one image feel like a diversity checklist.
- **Shallow depth of field** on people shots; deeper focus on environments.

WE DO NOT WANT

- **Stock-photo behaviour.** No thumbs-up, no high-fives, no laughing at a salad, no circle of colleagues clapping.
- **Clinical or medical cues.** No white coats, no clipboards, no hospital corridors, no therapy couch cliché.
- **Distress as a visual.** No head-in-hands, no crying, no person crumpled in a dark corner. We show hesitation, not suffering.
- **Sci-fi and cyberpunk.** No neon blue and purple, no glowing wireframes, no “the matrix”. This is the single most common mistake with VR imagery.
- **Cold white studio backgrounds** or anything that reads as a product catalogue.
- **Readable personal data** on any screen, wall or badge. Privacy is our core promise.

Three technical habits that will save us a round of revisions

1. **Leave the bottom third quiet** Every image on the site has a dark gradient and a caption laid over its lower portion. Keep faces, hands and anything important **out of the bottom 25%** of the frame.
2. **Colour will be shifted warm** Images are tinted toward the site's amber palette and partly desaturated. Do not supply an image where a specific colour is doing the work — a blue logo, a green sign, a colour-coded chart will not survive. Composition and light must carry the image.
3. **Shoot wider than the stated shape** Each image is used at one shape on desktop and often a different one on mobile. Frame with at least 15% spare on all four sides so we can re-crop without cutting into the subject.

01 The Gap

This page argues that support is more available than ever, but the *first step* still feels far away — that the distance is not between people and help, but between people and the way help is offered.

Images needed: 4 minimum, 6 ideal. 1 lead + 3 must-have + 2 nice-to-have.

REF	WHAT WE NEED TO SEE IN THE PICTURE	TYPE	SHAPE	PRIORITY
GAP-00	– LEAD — The pause before reaching out One person alone in an ordinary domestic or workplace setting, phone or laptop in hand but not being used — held, forgotten, looked past. They are thinking, not upset. Evening or late-afternoon light from one side. Shot slightly wide so they sit small in the frame with the room around them. This is the single most important image on the page: it has to say “I was about to, and then I didn’t” without a single sad face.	Photography	4:5 portrait	Must have
GAP-01	Help exists. Nobody is using it. A wellbeing noticeboard, helpline poster or support desk in a real corridor — office, campus or clinic — with people walking past it, blurred by motion. The support is clearly visible and clearly being ignored. Alternative version: a well-appointed, warmly-lit counselling room, door open, chairs empty, nobody in it.	Photography	4:3 landscape	Must have
GAP-02	Not everyone knows what they need A person at the very start of working something out — sitting on the edge of a bed, at a kitchen table early in the morning, or on a stairwell — mid-thought. Close-ish but not a tight portrait; we want to feel the room. Their face should be calm and unreadable rather than expressive.	Photography	4:3 landscape	Must have
GAP-03	The threshold A wide, architectural, almost empty frame: a person small in shot, paused at a doorway, at the top of a staircase, or halfway along a glass walkway. Read from behind or in profile — we do not need to see their face. This image carries a full-width headline, so the left half of the frame must stay visually quiet.	Photography	16:9 wide	Must have
GAP-04	A student, between everything A young adult sitting alone on campus steps, a library window seat or a bus, while the crowd moves past them out of focus. Same mood as GAP-02 but a clearly younger, education-setting cast.	Photography	3:4 portrait	Nice to have
GAP-05	The conversation that almost happens Two colleagues in an informal corner of a workplace — kitchen counter, stairwell, outside — in a real, slightly awkward, kind conversation. Coffee, not paperwork. One is listening properly. No manager-and-subordinate power staging.	Photography	4:3 landscape	Nice to have

Please avoid in this section: anything that illustrates mental ill-health directly — no silhouettes at windows, no rain on glass, no hands over faces, no grey-blue colour grade. The whole point of this section is that these people look completely ordinary.

02

Belief

This page sets out what we believe: that people are different, so wellbeing should adapt to the person rather than asking every person to fit one model. It also carries our four principles — people first, privacy by design, more than one way in, purpose over novelty.

Images needed: 4 minimum, 6 ideal. 1 lead + 3 must-have + 2 nice-to-have.

REF	WHAT WE NEED TO SEE IN THE PICTURE	TYPE	SHAPE	PRIORITY
BEL-00	– LEAD — Different people, different ways forward One frame containing several clearly different people who are visibly <i>not</i> doing the same thing — a shared but unstaged space (a co-working floor, a college common room, an apartment building seen through its windows at dusk) where three or four individuals each occupy their own pocket of it. It must read as variety of people at a glance. If one frame cannot do that, send four individual portraits shot identically instead — same light, same treatment, four very different people — and we will lay them out as a row.	Photography	4:5 portrait	Must have
BEL-01	Start with the person, not the problem A single person in <i>their own</i> environment, and the environment tells you who they are — a student's desk, a nurse's locker room, a parent's kitchen at 6am. They are settled and unhurried. We are illustrating the idea that context shapes need, so the surroundings matter as much as the person.	Photography	4:3 landscape	Must have
BEL-02	Privacy by design Someone using a device entirely privately — in bed, on a balcony, in a parked car, in a quiet corner — where the screen is clearly turned away, angled or too dim to read. The picture must communicate “nobody else can see this”. Critical: no readable text or recognisable interface on the screen.	Photography	4:3 landscape	Must have
BEL-03	Wellbeing as part of the everyday A wide, calm frame of an ordinary daily moment that is quietly also self-care: standing on a balcony with a coffee before the day starts, walking home with headphones, stretching in a doorway. Deliberately undramatic. This sits under a headline so keep the frame open.	Photography	16:9 wide	Must have
BEL-04	More than one way in A literal illustration of choice: a person holding a tablet or phone showing several different routes forward (we will supply the interface mock-up to place on the screen if you shoot a blank-screen plate). Alternatively an environmental metaphor — several doors, several paths — but only if it can be done without looking like a stock metaphor.	Photography + Screen	4:3 landscape	Nice to have
BEL-05	Practitioner and person A warm, informal conversation between a mental-health professional and someone they are supporting. Two chairs, soft furnishings, daylight. It must look like a room someone chose, not a room they were sent to. No desk between them, no notes visible, no white walls.	Photography	3:4 portrait	Nice to have

Please avoid in this section: lightbulbs, jigsaw pieces, compasses, sunrises, cupped hands and any other visual metaphor for “insight” or “support”. Also avoid images where one person is visibly the helper and one is visibly the helped.

03

MeloWorld

MeloWorld is our product: a private virtual space people enter as an **avatar**, with no photo and no public profile. They explore at their own pace and can connect with a qualified professional inside the platform when they choose to. Anonymity is the entire promise.

Images needed: 4 minimum, 6 ideal. 1 lead + 3 must-have + 2 nice-to-have.

Note on this section: most of these are computer-generated rather than photographed. We can supply reference material, brand assets and a style frame on request — please ask before starting any render.

REF	WHAT WE NEED TO SEE IN THE PICTURE	TYPE	SHAPE	PRIORITY
MEL-00	– LEAD — The world itself A wide establishing render of the MeloWorld environment: a calm, architecturally considered virtual space with warm light, soft materials, water or planting, and a sense of openness. It should feel like somewhere you would want to sit down — closer to a quiet pavilion or a garden courtyard than to a lobby, a clinic or a game level. One or two stylised avatars may be present in the distance for scale.	3D render	4:5 portrait	Must have
MEL-01	Your avatar A single stylised avatar, shown either standing in the environment or on a selection/customisation screen. The avatar must be clearly non-photoreal and not identifiable as any real person — that is the product's point. Stylised, warm, appealing; not cartoonish, not uncanny, not a game character with armour and weapons.	3D render	3:4 portrait	Must have
MEL-02	A session in the space Two avatars seated across from each other in a small, enclosed, private part of the environment — one is the person, one is the professional. Light suggests intimacy and safety. The composition should read unmistakably as a conversation without either figure having a real face or a nameplate.	3D render	4:3 landscape	Must have
MEL-03	Entering from the real world A photograph bridging real life and the platform: a person at home on a sofa or at a desk, laptop or tablet in front of them, MeloWorld visible on the screen (shoot a clean plate and we will composite). Ordinary room, warm evening light, relaxed posture — someone entirely at ease.	Photography + Screen	16:9 wide	Must have
MEL-04	Moving through the space A second environment render showing a <i>different</i> area of MeloWorld, so the two together prove the space has variety — for example an open outdoor-feeling area if MEL-00 is enclosed, or a quiet indoor alcove if MEL-00 is open. Same world, same materials, same light language.	3D render	4:3 landscape	Nice to have
MEL-05	What the organisation sees A clean mock-up of the engagement dashboard an employer or institution would see: aggregate numbers only — no names, no faces, no individual records in frame. Dark interface, amber accent, generous spacing. On a laptop, or as a flat screen graphic. We will supply the data.	Screen	16:9 wide	Nice to have

Please avoid in this section: anything that makes the platform look like a video game or a metaverse land-grab — no floating islands, no hexagonal grids, no purple-and-cyan gradients, no crowds of avatars, no leaderboards or HUD overlays. And never show an avatar next to a real name.

04

VR Wellness

Our second product: guided virtual experiences built for specific goals — relaxation, emotional regulation, confidence in social situations, gradual work on fears, and learning. We call it “a rehearsal space for real life”. Practitioners stay involved in how it is used.

Images needed: 4 minimum, 6 ideal. 1 lead + 3 must-have + 2 nice-to-have.

Read this before shooting for this section. Most VR imagery in the world is wrong for us: no close-up of a face in a headset, no person alone in a dark room grabbing at glowing shapes. We want VR shown as an **ordinary, social, domestic thing** — a real living room, daylight, sofa, rug, mug on the table, other people relaxed nearby.

REF	WHAT WE NEED TO SEE IN THE PICTURE	TYPE	SHAPE	PRIORITY
VRW-00	– LEAD — VR at home, among people The most specific request in this brief. A real living room, natural daylight, two or three people of different ages sharing the space. One wears a VR headset, seated or standing, mid-experience and relaxed — hands low, shoulders down, not flailing. The others are present and comfortable : one on the sofa with a book, glancing over; another passing through with a mug. Lived-in and unstyled. Shot wide from across the room so you read the whole social setting at once: <i>this belongs in a home, around other people, and nobody finds it strange.</i>	Photography	4:5 portrait	Must have
VRW-01	Inside the experience A render of what the person actually sees in the headset: a calm, purposeful environment — a shoreline at low light, a forest clearing, a still room with a long view. It must read as a wellbeing environment , not a game level and not a screensaver. No interface, no floating menus, no hands or controllers in frame.	3D render	16:9 wide	Must have
VRW-02	A guided session with a professional A mental-health professional seated <i>beside</i> a person wearing a headset, in a warm consultation room — soft chairs, lamp, plant, daylight. Attentive, perhaps holding a tablet, clearly guiding rather than observing an experiment. Expertise stays in the loop, so the two must read as working together .	Photography	4:3 landscape	Must have
VRW-03	Practising a real situation A first-person render of a scenario someone would rehearse: standing at the front of a meeting room with people seated and looking up, stepping into a lift, or approaching a small group at a social event. Rendered at the user's own eye level. Figures stylised in the same language as the MeloWorld avatars, not photoreal.	3D render	4:3 landscape	Must have
VRW-04	Second social setting, not a home The same idea as VRW-00 but in a workplace or campus wellbeing room: two or three people, one in a headset, others nearby and at ease, daylight, soft furnishings. A non-domestic version of the same message, for our organisational pages.	Photography	4:3 landscape	Nice to have
VRW-05	The headset, at rest A quiet still life: the headset on a side table, shelf or windowsill in a warm domestic or office setting, beside ordinary objects — a book, a mug, a plant. Available light, shallow focus, no black backdrop, no studio sweep. An object that lives in the house.	Photography	3:4 portrait	Nice to have

Please avoid in this section: close-up faces in headsets; people alone in dark rooms; hands grabbing at glowing blue particles; neon, wireframes or “digital” overlays; anyone looking amazed or comedic; gaming chairs, RGB lighting, esports setups. If it would work as an advert for a games console, it is wrong for us.

05

Who It's For

This page shows the three settings NEXR is built for: **workplaces, schools & colleges, and healthcare**. The three appear side by side as a row of equal tiles.

Images needed: 4 minimum, 5 ideal. 1 lead + 3 must-have + 1 nice-to-have.

Important: WHO-01, WHO-02 and WHO-03 sit next to each other on screen as three equal tiles. They must be shot as a **matched set** — same lens character, same height of camera, same light quality, same grade, same amount of breathing space. If one is a wide daylight frame and another is a tight lamp-lit one, the row falls apart.

REF	WHAT WE NEED TO SEE IN THE PICTURE	TYPE	SHAPE	PRIORITY
WHO-00	– LEAD — Designed for people, built for organisations A single frame that reads as “an everyday institutional space, with real people in it” — a modern building's shared floor, atrium or long corridor with daylight and a handful of people going about their day. It should not obviously be an office, a school or a hospital; it should feel like it could host any of them. People small in frame, architecture doing the work.	Photography	4:5 portrait	Must have
WHO-01	Workplaces A real, contemporary, un-corporate workplace: warm materials, plants, natural light, a small group of people working or talking normally. Mixed ages and roles. No glass-tower boardroom, no suits, no stock “team meeting” staging.	Photography	4:3 landscape	Must have
WHO-02	Schools & colleges Students aged roughly 16–22 in a campus setting — a common room, library, step or courtyard. Relaxed, mid-conversation or mid-work, unposed. It must clearly read as education without reading as a prospectus cover.	Photography	4:3 landscape	Must have
WHO-03	Healthcare A mental-health professional's own consulting room, warm and domestic in feel — soft chairs, lamp, books, daylight — either with a practitioner present or quietly empty and ready. Deliberately not medical: no white coat, no examination bed, no hospital corridor, no equipment.	Photography	16:9 wide	Must have
WHO-04	Bringing it in An onboarding or walkthrough moment inside one of the three settings: a small group standing around a screen or a headset while someone shows them how it works. Practical, unglamorous, real.	Photography	4:3 landscape	Nice to have

Please avoid in this section: any suggestion of surveillance or assessment — no one looking over a shoulder at a screen, no clipboards, no one-to-one across a desk. Also avoid children under about 16 entirely.

06

Let's Talk

The closing section of every page: an invitation to book a demo and start a conversation. Warm, open, human — the visual equivalent of an open door.

Images needed: 3 minimum, 4 ideal. 1 lead + 2 must-have + 1 nice-to-have.

REF	WHAT WE NEED TO SEE IN THE PICTURE	TYPE	SHAPE	PRIORITY
CTA-00	– LEAD — An open door Warm, welcoming, and genuinely about arrival: a person holding a door or standing in a lit doorway; or a sunlit reception area with someone rising to greet a visitor just out of frame. Amber-toned light, generous space, nothing to decode. This image ends every page, so it needs to leave the reader feeling invited rather than sold to.	Photography	4:5 portrait	Must have
CTA-01	Book a demo A walkthrough in progress: one person showing two or three others the platform on a large screen or a laptop in a meeting room. Everyone is engaged and leaning in; the screen content does not need to be legible (we will composite it if it is). Natural, mid-conversation, not a presentation set-piece.	Photography	4:3 landscape	Must have
CTA-02	Connect with us A wide, calm frame of the working environment — a studio or office with warm light, a few people at work, plenty of empty space in the left or right third for a headline and a button to sit over. Quiet and confident rather than busy.	Photography	16:9 wide	Must have
CTA-03	The team An informal group portrait of the NEXR team, or a candid of two or three people working together. Real setting, available light, no white background and no arms-folded line-up. Requires NEXR to arrange the people and location — please coordinate with us before scheduling.	Photography	4:3 landscape	Nice to have

Please avoid in this section: handshakes, contracts being signed, headsets, “customer service” telephone headsets, and anything that reads as a sales close.

How to deliver the files

File format and size

Format	JPEG (quality 90+), PNG or TIFF. Do not send WebP, HEIC or PDF — we convert to web formats ourselves.
Resolution	At least 2400 pixels on the long edge . More is welcome; we have full-bleed uses. 3D renders: 3000px on the long edge minimum.
Colour	sRGB, embedded profile. Please do not apply a heavy creative grade — deliver close to neutral and we will apply the site's warm treatment.
Crops	Send two versions of each image : (1) cropped to the shape listed in the table, and (2) the full uncropped master. The master is what lets us re-crop for mobile without coming back to you.
Retouching	Light clean-up only. No skin smoothing, no sky replacement, no added lens flare, no composited-in devices unless we agreed it.
Rights	We need worldwide, perpetual, unlimited web and print usage , including paid social and print collateral. Please confirm model and property releases are in place for every recognisable person and location.

Naming

Use the **REF code** from the tables, lower case, followed by a short description and the crop. This matters more than it looks — it is how the files get placed on the site without anyone having to open them:

vrw-00_home-social_4x5.jpg	Cropped, ready to place
vrw-00_home-social_master.jpg	Full uncropped frame
mel-02_session_4x3.png	Cropped render
who-01_workplace_4x3.jpg	Cropped, ready to place

Please come back to us on these before you start

- 1. Cast and locations.** Confirm with us which markets the cast should reflect, and send casting and location options for approval before any shoot date is locked.
- 2. Anything rendered.** Send a single style frame for MeloWorld (MEL-00) and one for VR Wellness (VRW-01) and get them signed off before building the rest. The look of those two sets the look of both products.
- 3. Anything with a screen in it.** Tell us in advance and we will supply the interface artwork, or shoot a clean plate and we will composite.
- 4. Counts.** If a section's ideal count is not achievable, tell us which images you are dropping so we can adjust the page layout rather than leaving a hole in it.

In one line: 23 images to make the site work, 33 to make it sing. Six of them (the LEAD images) matter more than the rest. If in doubt on any frame, choose the warmer, quieter, more ordinary version of it.
